

Qualmark Introduces New Reliability Test System, the OVTT 24

(Denver, Colorado – February 26, 2013) Qualmark Corporation, the world's largest provider of HALT/HASS accelerated reliability testing products and services, today announced the release of their new OVTT™ 24 system. This new OVTT (OmniAxial™ Vibration Table Top) offers a larger version of the original OVTT, now renamed the OVTT 18, which introduced the first stand-alone, compact, repetitive shock vibration system on the market.

The OVTT 24 may be compact, but it still delivers the essential six degree of freedom, repetitive shock broadband vibration for detecting failure modes missed by single-axis systems. The table area is 77% larger than the original OVTT

accommodating more or larger product. Four cable ports are located in the base which allows the lid to be raised and lowered to facilitate easy access to devices under test. The system's 24" x 24" patented xLF2 table is powered by 5 lubricant-free actuators providing up to 60 gRMS acceleration.

The larger table size makes it ideal for in-line process testing of products, quick evaluation of field returns, and repair verification. The OVTT 24 can be configured for placement inside a thermal chamber for combined tests with thermal ranges of -50°C to +150°C.

“Qualmark continues to pioneer new accelerated reliability testing technologies to provide effective tools for increasing the reliability of modern electronics. Design complexity and new manufacturing platforms challenge traditional approaches for detecting product failure modes,” points out Qualmark CEO and President, Andy Drenick, “and Qualmark’s mission is to provide innovative solutions, such as our QFusion® system introduced last year, that help the world make better products.”

Qualmark Corporation, (www.qualmark.com) Qualmark Corporation is the world's largest provider of HALT and HASS systems and services that advance product reliability and reduce total product costs for leading manufacturers and their global supply chains. Qualmark has installed more than 1,000 of its proprietary testing systems in over 30 countries, and has an Authorized Lab Partnership network that includes more than 30 independently owned and operated testing labs that utilize Qualmark products.
